

(a) B₁: $c_p = 5/6$, $\delta_0 = 15$

(b) B₂: $c_p = 5/6$, $\delta_0 = 20,000$

Mixed TR

TR benchmarks

PR

Pre-adjustment value, $z = \alpha d + \theta$

Comparison

$$d^{PR} > d_{pp}^{TR} > d_{cp}^{TR}$$

$$\Pr(TR \text{ accept}) = 0.573$$

$$\Pr(PR \text{ accept}) = 0.641$$

$$U_R^{PR} - U_R^{TR, \text{mix}} = +0.0381$$

$$d_{pp}^{TR} > d^{PR} > d_{cp}^{TR}$$

$$\Pr(TR \text{ accept}) = 0.603$$

$$\Pr(PR \text{ accept}) = 0.632$$

$$U_R^{PR} - U_R^{TR, \text{mix}} = -0.0120$$

◇ Reach boundary $c - Y(d)$ ■ Adjustment reach ■ Natural pass $z > c$

Dark shaded baseline mass is mapped to an atom at $m = c$; for $z > c$, $m = z$.
